PROFESSIONAL SUMMARY

Backend Engineer with 6+ years of experience building scalable distributed systems and microservices using Java and Spring Boot. Experienced in designing low-latency, fault-tolerant backend systems handling 2M+ requests/day with strong focus on scalability, reliability, and performance optimization. Worked on monolith-to-microservices modernization initiatives and improved system stability by reducing production incidents by 25%.

SKILLS

Languages: Java, SQL

Backend: Spring Boot, Microservices, REST APIs, Kafka, Distributed Systems

Database: MySQL, Database Design, Query Optimization, Indexing, Transaction Management

Cloud & Infrastructure: AWS, Docker, Kubernetes, Git

Architecture: Scalability, Fault Tolerance, High Availability, Event-Driven Architecture, System Design

TECHNICAL EXPERIENCE

Senior Software Engineer | Backend Platform Engineering

Apr 2023 — Present

Rakuten Symphony India

Indore, Madhya Pradesh

- Led modernization of distributed backend services handling **2M+ requests/day**, improving scalability, reliability, and deployment velocity.
- Designed and implemented **5+ contract-driven REST APIs** integrating external vendor systems, reducing integration failures by **15%** and improving service interoperability.
- Engineered fault-tolerant backend services using retry, circuit breaker, and failure isolation patterns in Spring Boot, reducing production incidents by **25%** and improving system availability to **99.9%**.
- Improved deployment safety and release confidence by increasing automated test coverage using JUnit and Mockito, reducing regression-related rollbacks by **20%**.
- Contributed to scalable microservices architecture focused on resiliency, observability, and backend platform modernization.
- Mentored junior engineers and conducted code reviews, reinforcing backend engineering best practices and code maintainability.

Software Engineer | Inventory Platform

Mar 2022 — Apr 2023

Rakuten Symphony India

Indore, Madhya Pradesh

- Built backend services for a **real-time inventory platform** managing **100K+ records** under peak load with focus on low-latency and high availability.
- Automated role-based approval workflows, reducing manual processing time by **40%** and improving operational efficiency.
- Optimized SQL queries and indexing strategies, improving API response latency by **20%** and enhancing database performance under peak load.
- Improved data consistency and concurrency handling by refining transaction boundaries and database interaction patterns.

Software Engineer | Backend Platform Development

Sep 2019 — Mar 2022

Rakuten Symphony India

Indore, Madhya Pradesh

- Developed backend systems tracking rollout operations across **20K+ telecom sites**, improving operational visibility and reporting accuracy.
- Designed scalable data ingestion APIs aggregating multi-region operational data into centralized backend systems.
- Improved backend reliability and data quality through validation frameworks and structured error-handling mechanisms.

ACHIEVEMENTS

- Reduced production incidents by **25%** using resilient backend engineering and fault-tolerant design patterns.
- Built scalable distributed backend systems handling **2M+ requests/day** with focus on reliability and operational excellence.

PROJECTS

- Payment Orchestrator** — Architected a distributed payment processing platform using Spring Boot, Kafka, Redis, MySQL, and Resilience4j, implementing event-driven communication, provider routing, idempotency, retries, circuit breakers, and observability to ensure reliable transaction execution under failure-prone conditions.

EDUCATION

Acropolis Institute of Technology & Research, Indore, India

Jun 2015—Jun 2019

Bachelor of Engineering - Information Technology
